Print at 100%

Map your circuits first, then write each one in: room + the specific load it feeds (for example, "Kitchen — counter outlets, east wall" — not just "plugs"). Trim the sheet to fit inside your panel door, or use it as your worksheet and copy the results onto labels.

LEFT SIDE — ODD NUMBERS		RIGHT SIDE — EVEN NUMBERS	
1		2	
3		4	
5		6	
7		8	
9		10	
11		12	
13		14	
15		16	
17		18	
19		20	

Tips

- Double-pole (240V) breakers feed two slots — write the load (range, dryer, A/C) across both numbers.
- Print on card stock or full-sheet label paper, and test-fit one row before you commit to the whole sheet.
- Leave a couple of rows blank for future circuits, and pencil in changes before you ink them.

Free sample from the Fuse Box & Wiring Label Templates pack — 14 pages of fuse box labels, wire & cable labels, a full circuit directory and blank write-in labels — at workshopprintables.com
